Ultraviolet Disinfection Systems

Spectra III Control Panel Upgrades

xylem

Spectra III Controllers

Re-power options for your legacy ETS-UV disinfection systems.

For nearly two decades, ETS-UV systems have been installed in demanding commercial aquatic environments and continue to operate reliably well beyond their original warranty periods. Many of these systems—manufactured as far back as 2005—remain mechanically sound, even as control electronics and components naturally reach end-of-life.

As electronic technologies evolve, certain legacy components used in earlier Spectra control platforms are no longer manufactured or supported. In some cases, this increases repair costs; in others, it limits repairability altogether. To address this reality, we offer a structured control panel upgrade path that allows qualifying systems to be modernized without replacing the reactor itself.

Upgrade to Spectra III Controls

The Spectra III control platform utilizes the latest electronic ballast and control technologies, offering meaningful improvements in efficiency, diagnostics, and long-term serviceability. Compared to earlier Spectra I and II systems, Spectra III provides:

- Lower power consumption through modern electronic ballast design
- Softer lamp strike for improved lamp life
- Reduced component count for increased reliability and simpler service
- Enhanced diagnostics and fault-finding capabilities
- Expanded selectable inputs and outputs
- MODBUS communication capability for facility integration
- Improved lamp power control with adjustable output from 100% down to 30%
- On-screen automatic wiper calibration
- Full support from our current customer care and technical teams

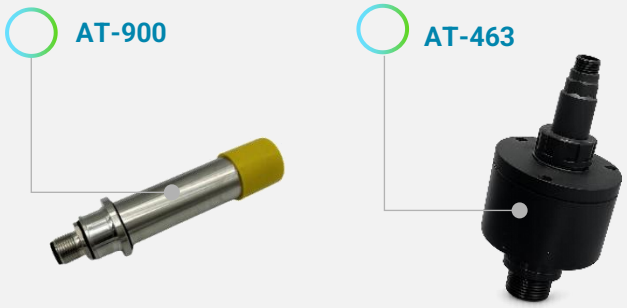
In most cases, upgrades utilize the existing power supply and reactor infrastructure, requiring only panel and cable replacement. This minimizes downtime and avoids costly pipework or chamber modifications. Eligibility for upgrade depends on system configuration and reactor compatibility; not all legacy systems can accept a new control panel.

How to use this guide:

Step 1 – Identify Your Control Panel

- Locate your UV model number on the UV control panel label, usually found on the lower right corner of the door, or on the inside of the control panel door.
- If you cannot locate the label, find your serial number that is etched into the pipe flange of the UV Chamber, and call your sales representative for support.

Step 2 - Determine Your UV Intensity Sensor



Step 3 - Choose Your Cable Set

- Once you've determined what type of intensity sensor you have, select the cable set listed for your system that indicates that sensor in the description.
- Cable sets are available in 30' or 100' lengths only.

Step 4 - Choose your PM Parts

- To offer an additional 5-year warranty on the equipment, add the proper preventative maintenance parts to your order.
- *Note: The listed components are the minimum purchase requirement; your system may require additional components. Please confirm maintenance requirements before purchasing.*

	1000-2952	Quartz - QSL 36X470	4	$269.38
	1000-3011	ECF-SK4 QUAD RING SEAL KIT	1	$668.51
	1000-3463	ECF Lead Screw	1	$138.66

Startup & Commissioning

Commissioning:

An ETS UV commission ensures that your system is correctly installed, calibrated and working at optimum performance from day one. Additionally, commissioning by an authorized ETS UV Technician is the first step in validating your warranty.

To arrange a service or commission, please contact your local authorized service provider, or our office:

E: ets-uv.service@xylem.com

T: (1) 877-885-4628

For Service Partners, please refer to the startup documentation available in the Spectra III Replacement Control Panel O&M.

For warranty extension, commissioning documentation must be completed and emailed to: **ets-uv.service@xylem.com**
